

**I: ADEM Leadership -- Bringing Stakeholders Together to Address Important Issues**

ADEM Leadership -- Bringing Stakeholders Together: Through ADEM's continued leadership, ADEM would lead the way in bringing communities, permittees, as well as other local government entities together to share important information, ensure that its citizens and stakeholders understand roles, rights, and responsibilities and address issues constructively.

- A. ADEM will coordinate a meeting between the Arrowhead Landfill community and the permittee (Green Holding Group, LLC) to discuss and inform the community about the permitted facility boundaries, the regulated activities allowable within the facility boundaries, and the facility's short-term and proposed long-term development goals.
- B. In response to the community's concern about the management of the cemetery, ADEM will coordinate a meeting between the Arrowhead Landfill community and the permittee (Green Holdings Group, LLC) to discuss the reduction of the permitted landfill boundary to ~973.85 acres (a reduction of ~3.12 acres) and the roles and responsibilities related to the overall management of the cemetery property.
- C. ADEM will ensure that inspection records, notices of violations, monitoring reports (e.g., land, air, and water quality), and corrective actions for the permittee are made publicly available through the eFile system, linked to the "What's Happening in Your County" website, and emailed to points of contact within Perry County and the Town of Uniontown.
- D. For the Arrowhead Landfill and Dothan Landfill communities and throughout the state, ADEM will investigate landfill complaints in a timely manner and provide the complainants an opportunity to meet with and provide information to ADEM outside of the presence of the permittees.
